

NVIDIA Academic Grant Program — Application Document

BlockID.au: AI-Powered Startup Valuation Platform

Applicant: Do Van Long | **Organization:** Auschain PTY LTD | **Date:** May 2026

PART 1: PROJECT PROPOSAL

1. Project Title

Agentic AI for Automated Startup Valuation: A Multi-Model NLP Approach to Evidence-Based Business Scoring

2. Project Summary

This project develops an AI-powered startup valuation engine that uses multi-model NLP (Claude, GPT-4o, Gemini) to extract business signals from unstructured founder descriptions and produce evidence-backed scores across 8 dimensions. The system — deployed as BlockID.au — serves Australian founders from idea stage to investor readiness, generating personalised reports with actionable growth plans.

3. Research Problem

90% of startups fail globally (ABS, 2025). In Australia, 370,500 businesses closed in FY2024-25 while 437,150 started. The fundamental gap: founders lack affordable, structured tools to measure business value, track progress, and prepare for investment.

Traditional valuations cost A\$5,000-\$50,000 and take weeks. AI can reduce this to 60 seconds at near-zero marginal cost — but requires sophisticated NLP to extract meaningful signals from diverse, unstructured startup descriptions.

4. Technical Approach

4.1 Multi-Model NLP Pipeline

Our system uses a cascading AI architecture with automatic failover: - **Primary:** Anthropic Claude Sonnet/Haiku for deep text analysis - **Secondary:** OpenAI GPT-4o-mini for fallback - **Tertiary:** Google Gemini 2.0 Flash for cost-effective generation

The pipeline processes unstructured text to extract 50+ business signals across 8 dimensions: 1. **FTV** — Founder & Team Value (15% weight) 2. **MPC** — Market & Problem Clarity (18% weight) 3. **PTD** — Product & Technical Depth (12% weight) 4. **TRE** — Traction & Revenue Evidence (20% weight) 5. **CGH** — Cap Table & Governance Health (12% weight) 6. **IRI** — Investor Readiness Index (10% weight) 7. **LCO** — Legal & Compliance (8% weight) 8. **SVM** — Strategic Vision & Moat (5% weight)

4.2 Evidence-Based Scoring

The Startup Value Index (SVI) starts at a baseline of 100 and adjusts based on: - Weighted dimension scores (0-100 per dimension) - Evidence confidence multiplier (self-declared → verified)

sources) - Risk penalties (structural risks like single founder, no IP, etc.) - Stage bonuses (idea through investor-ready)

4.3 Agentic AI Architecture

The platform operates 15 specialized AI agents (CTO, CMO, CFO, CPO, etc.) managed through Claude Code, each handling different aspects: analysis, report generation, competitive research (with web search), content creation, and pitch deck generation.

4.4 NVIDIA Technology Integration Plan

- **Phase 1:** Deploy fine-tuned Llama 3 models on NVIDIA GPUs for faster, private SVI inference
- **Phase 2:** Use NVIDIA TensorRT to optimise signal extraction for sub-second batch processing
- **Phase 3:** Implement NVIDIA Riva for voice-to-SVI input (founders describe ideas verbally)
- **Phase 4:** Leverage NVIDIA NeMo for domain-specific fine-tuning on Australian startup data

5. Current Results

- **Platform:** Live at <https://blockid.au> with production users
- **Analyses:** 39 SVI analyses completed, \$5.5M+ valuations tracked
- **Users:** 8 active founders, 5 paying customers
- **Tools:** 10 free startup tools (equity, dilution, cap table, term sheet AI)
- **Content:** 31 auto-generated SEO articles with 90 inline SVG infographics
- **Reports:** 11-page personalised PDF reports with progressive action plans

6. Expected Outcomes

- Reduce average startup analysis time from weeks to 60 seconds
- Achieve 85%+ correlation between AI-generated SVI and professional valuations
- Process 1,000+ analyses/month with NVIDIA GPU-accelerated inference
- Publish research paper on multi-model NLP for startup valuation
- Create open benchmark dataset for Australian startup signals

7. Timeline

Phase	Duration	Deliverable
Phase 1	Months 1-3	Llama fine-tuning on NVIDIA GPUs
Phase 2	Months 3-6	TensorRT optimisation, batch inference
Phase 3	Months 6-9	Riva voice integration, NeMo training
Phase 4	Months 9-12	Research paper, benchmark dataset

8. Budget & Resources Needed

- NVIDIA GPU access (A100/H100) for model fine-tuning
- NVIDIA DGX Cloud credits for training experiments
- TensorRT and Triton Inference Server licenses
- Technical mentorship from NVIDIA research team

PART 2: CURRICULUM VITAE

Do Van Long

CEO & Founder | **Auschain PTY LTD** | **BlockID.au** Sydney, NSW, Australia | ceo@longcare.au
| linkedin.com/in/dovanlong

Professional Summary

Technology entrepreneur with 20+ years of executive experience in AI, blockchain, and enterprise software. Founder of Vietnam Blockchain Corporation (2016) — Vietnam's first certified Science & Technology Enterprise in blockchain. Currently building BlockID.au, an AI-powered startup valuation platform. Australian Global Talent Visa holder.

Education

Degree	Institution	Year
Doctor of Business Administration (DBA) Candidate	Swiss School of Business and Management (SSBM)	2023-2027
Research: IoT-HCM Grid on VINAREN Network	University of Hawaii (publication)	2008

Current Ventures

CEO & Founder — **Auschain PTY LTD** (2023-Present) Sydney, Australia | ACN 659 615 111 - Founded BlockID.au — agentic AI valuation platform for Australian startups - Architected multi-model NLP pipeline (Claude + GPT-4o + Gemini) with automatic failover - Built complete platform solo with 15 AI agents as engineering team - 39 analyses completed, \$5.5M+ valuations tracked, 5 paying customers - 10 free tools, 31 auto-generated articles, 3 pitch videos produced

Founder & CEO — **Vietnam Blockchain Corporation (VBC)** (2016-Present) Ho Chi Minh City, Vietnam - Vietnam's first certified Science & Technology Enterprise in blockchain (2019) - 50+ blockchain projects delivered, 180+ partners and customers - Built: Agridentical.vn (agri-traceability), SmartBallot.io (voting), Covidpass.vn (health records) - Blockchain-as-a-Service (BaaS) platform serving enterprise clients - ISO 9001:2015 certified blockchain solutions

Technical Expertise

- **AI/ML:** NLP, multi-model orchestration, prompt engineering, agentic AI systems
- **Blockchain:** Cosmos SDK, CosmWasm, smart contracts, tokenization, DeFi
- **Full-stack:** Next.js, TypeScript, React, Node.js, PostgreSQL, Docker
- **Cloud:** GCP, AWS, GitLab CI/CD, Supabase, Vercel
- **Languages:** Python, JavaScript/TypeScript, Go, Solidity

Awards & Recognition

- **I-Star 2022** — Top 10 Individuals Supporting Startup Activities (Innovation & Entrepreneurship Award, Vietnam)
- **AusTalent Member** — Community of highly skilled professionals invited to Australia through Global Talent Visa Program
- **GBA APAC Member** — Government Blockchain Association, Asia-Pacific chapter

Publications

- “IoT-HCM Grid on VINAREN Network & Research for Bioscience Applications” — University of Hawaii, 2008
- 31 AI-generated research articles on startup valuation methodology — BlockID.au Insights, 2026

Speaking & Industry

- Speaker on blockchain as trusted internet infrastructure (multiple conferences)
- Vietnamese Business Forum in Australia — invited participant
- Blockchain solutions for Australia-Vietnam export supply chains
- APAC Entrepreneur — featured profile on visionary leadership

Products Built

Product	Technology	Users
BlockID.au	AI/NLP, Next.js, Multi-model AI	8 founders, 39 analyses
Agridential.vn	Blockchain traceability	Agricultural supply chains
SmartBallot.io	Blockchain voting	Electoral systems
Covidpass.vn	Blockchain health records	COVID-19 management
VBchain	Enterprise blockchain	180+ partners
Auschain Certify	Product provenance	AU-VN trade verification

Community

- AusTalent — Vietnamese entrepreneurs in Australia (Global Talent Visa holders)
- Government Blockchain Association — APAC chapter
- Sydney startup ecosystem — Fishburners, Stone & Chalk network
